FIG RE 3. The figure shows a grid of small plots. The top-left plot is labeled '128'. The grid contains various patterns of black and white pixels, representing data points for different bivalve species or sizes. The plots are arranged in a roughly rectangular grid, with some plots appearing more densely populated than others. The overall layout is a large-scale visualization of bivalve data.

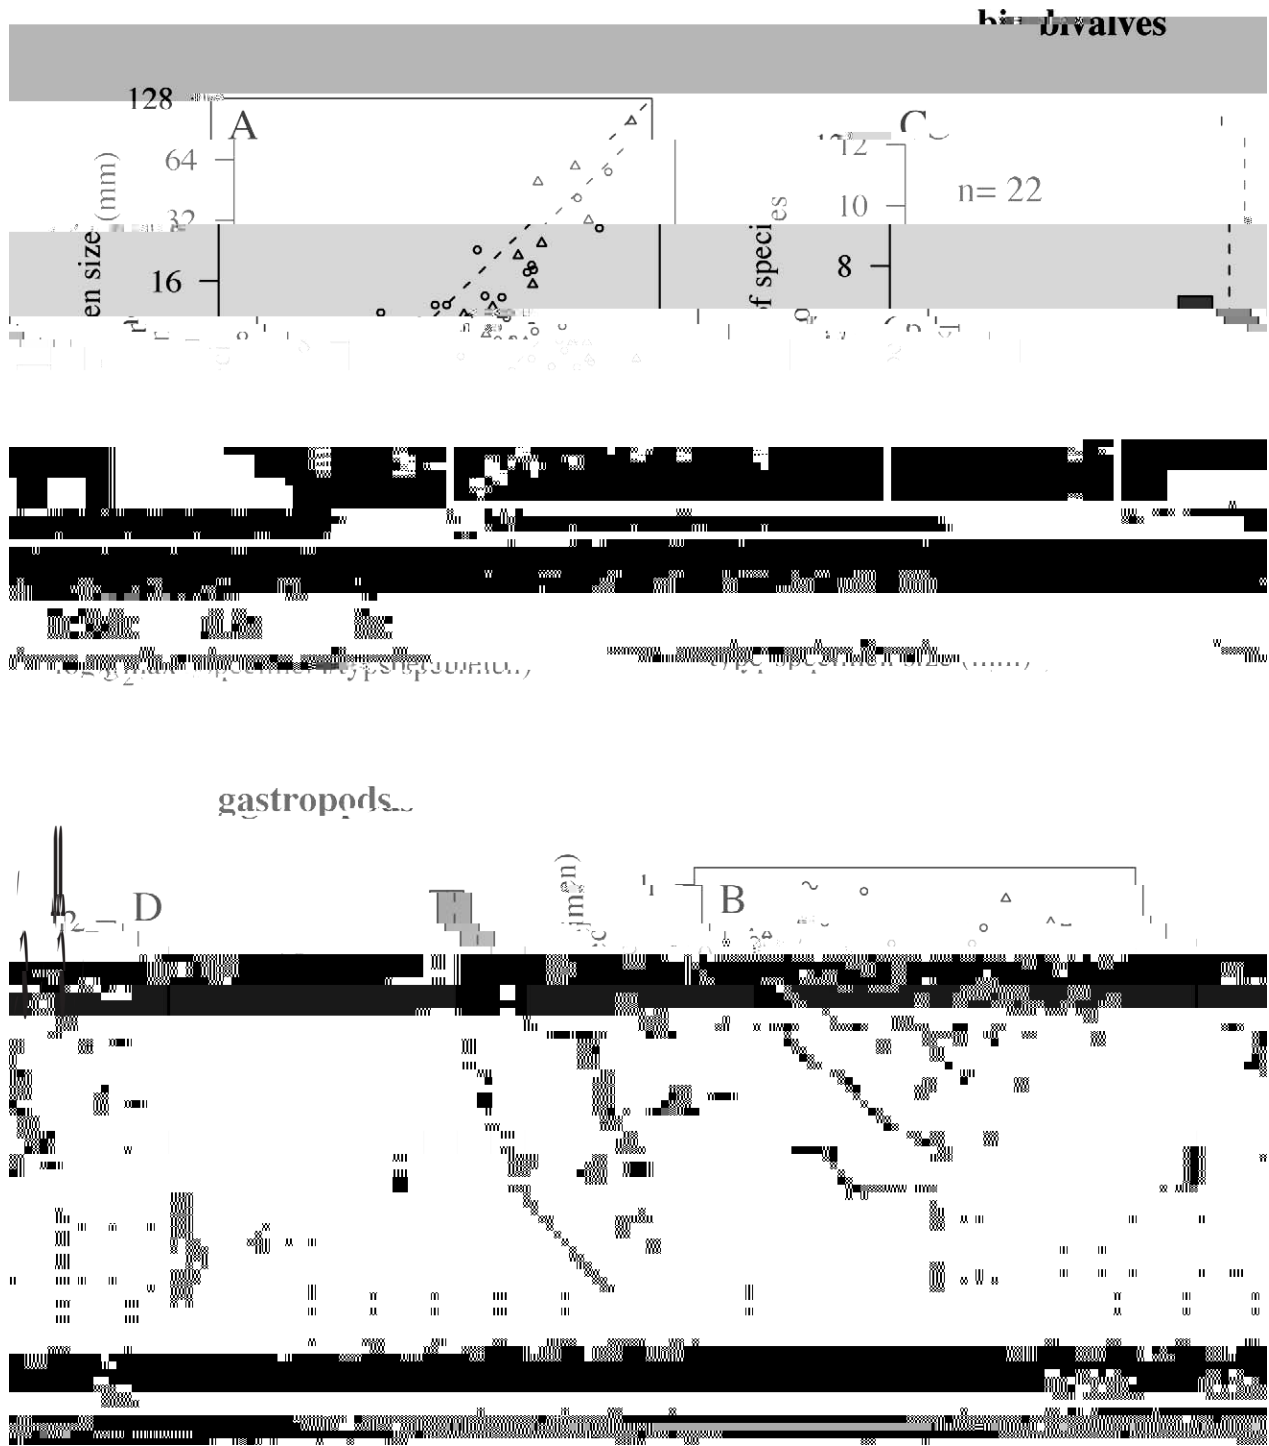

FIGURE 4. Relationship between mean size (mm) and number of species for bivalves (A, C) and gastropods (B, D). Data are from the same sites as in Figure 1. n = 22 for bivalves and n = 10 for gastropods.
